

Reveal Lite 2.0

6 Element Simplified Risk Assessment Score

The REVEAL 2.0 risk calculator is based on the validated REVEAL 1.0 risk calculator but includes all-cause hospitalization within the previous 6 months, refines the definition of renal insufficiency, and adjusts the thresholds and values of existing variables. To streamline this tool for use in busy clinical settings, abridged versions of REVEAL 2.0, REVEAL Lite, which use exclusively noninvasive variables, have been developed. (1)

Variable	Reference	Patient
Renal insufficiency	eGFR <60 mL/min/1.73m ² or defined by clinical judgment if eGFR is not available = +1	
Vital signs: SBP	SBP <110 mmHg = +1	
HR	HR >96 = +1	
6MWD	≥440 m = -2 320 to <440 = -1 <165 m = +1	
BNP/ NT-proBNP	BNP <50 pg/mL OR NT-proBNP <300 pg/mL = -2 BNP 200 to <800 = +1 BNP ≥800 pg/mL OR NT-proBNP ≥1100 pg/mL = +2	
		+6
Total		

Risk profile:

Score	0-5 LOW	6-7 Intermediate	≥8 High
Mortality	2.9% (1.8-3.9)	7.1% (5.4-8.8)	25.1% (21.9-28.4)
Possible Action	Consider Dual Therapy	Escalate Care	Escalate Care/Include Prostacyclin, consider IV/SQ
